

1. Structuring Job Listings with Semantic Elements:

In this activity, students will create a structured job listings page using HTML5's semantic elements.

Task: Create a page for displaying job listings with appropriate semantic elements.

2. Adding Audio Content:

This activity involves adding an audio introduction to the job portal.

Task: Embed an audio introduction that welcomes users to the job portal.

3. Adding Video Content with Controls:

In this activity, students will add a video presentation about the job portal's mission.

Task: Embed a video presentation about the job portal's mission and provide video controls.
