# Introduction

This document is a specification for the exercise problems for the topic, HTML Forms. It tests the student's level of knowledge and understanding of the topic.

This document consists of a set of problems that the student needs to solve and submit to the trainer, in the format specified in the Deliverable section of this document.

This exercise is to be performed only after the theory and workshop sessions of the topic, hence the student would have enough knowledge and confidence on the topic. Ideally, the student should be able to solve the problems himself/herself; however, he/she can seek the assistance of the trainer or lab assistant in case he/she is stuck with a specific problem.

## Objectives

The objectives of this exercise are to test the student's understanding and knowledge on the topic, and to allow him to re-iterate his understanding by applying that knowledge in a software problem, so that he can use it in the further Programming endeavors.

## Problem 1: Create HTML page

The screenshot shows a web application interface for job posting. On the left is a blue sidebar with the text "HireMe Now!" and a list of menu items: "Dash Board", "jobs", "Applications", "Interviews", "Messages", and "Settings". Below the menu is a user profile icon with a plus sign and the text "Addnew". The main content area is white and contains a form for creating a job post. The form has five text input fields labeled "Job title", "Description", "Salary", and "Location". Below these fields are three checkboxes: "post a job", "Push notification", and "Email notification". The top right corner of the page has a navigation bar with a bell icon, a user profile icon, and a "Logout" link. The bottom of the page is a blue footer with the text "Get your Dream job....." and two icons: a house and a calendar.

HireMe Now!

Dash Board  
jobs  
Applications  
Interviews  
Messages  
Settings

+ Addnew

Job title  
Description  
Salary  
Location

☐ Push notification ☐ Email notification

Get your Dream job.....

## Features to be developed

### **The HTML page Which Contain**

- **Heading**
- **Paragraphs**
- **Image**
- **Use image**
- **Lists**
- **HyperLinks**
- **Table**
- **Forms**

### **Deliverable**

1. The entire program should be developed in a single Basic HTML and delivered as a git hub link.

## **Demo**

The student should demonstrate the program to the instructor on a PC, by explaining the features one by one.

## **Conclusion**

The completion of this exercise should re-iterate the student's confidence on Basic HTML. Please make sure you have gained enough confidence to move on.
