**1. Creating a Contact Form:**   In this activity, students will create a simple contact form with fields for name, email, and message.
+
   Task:   Create an HTML form that collects the user's name, email address, and a message. Include appropriate labels for each field and a "Submit" button.

**2. Selecting Preferred Options:**   This activity helps students understand how to create radio buttons and checkboxes for selecting preferred options.

   **Task:** Create an HTML form that allows users to select their preferred programming languages using checkboxes and their preferred operating system using radio buttons.

**3. Ordering Pizza with Dropdowns:**   This activity introduces students to dropdown menus by creating a form to order a pizza with various options.

   Task:   Create an HTML form that allows users to order a pizza. Provide dropdown menus for selecting pizza size, crust type, and toppings.

**These activities should provide students with a hands-on experience of creating basic HTML forms and using different form elements like text inputs, radio buttons, checkboxes, and dropdown menus.**
